Product Information

Door closing force measurement
Type:HGE-DC700N  DataManager Software

According to: EN 14752:2015

Your advantage:

- Meets all requirements of the standard EN 14752:2015
- Compact force sensor with only 1.9 kg weight
- No laptop required for the measurement, the measuring protocol can be viewed directly on the handheld display
- Entering the signature via touchscreen display
- Memory for up to 1,000 vehicle measurements
- Allows input of tester name, job number, vehicle number, vehicle running performance (mileage), notes, door name and door type with the corresponding limit values
- Special measurement mode for doors with a temporary force impulse at the beginning of closing process
- Display of the measurement data from the last door measurement
- Multiple usage of the handheld computer for further HGE measuring devices
- The device includes spacers and accessories fit into a handy case (52 x 42 x19 cm)

Version 01/18
Door closing force measurement device
Type HGE-DC700N

The door closing force measuring device type HGE-DC700N is an outstanding instrument for the measurement and evaluation of the closing force of railway-, tram- and bus doors. The measuring device was constructed according to EN 14752:2015. This applies to side entrance systems for rolling stock of all new constructed railways and existing vehicles with modernized door systems.

The comprehensive measurement system consists of a handheld computer PSION WORKABOUT with measurement software and carrying case, a charging station for transmitting the data to the computer, the closing force sensor with a measuring range up to 700 N and defined spacers to be able to measure at different door opening widths. The data can be transferred using the evaluation software HGE-DataManager © on the computer and analyzed with the HGE-Viewer ©.

The simple constructed measurement software guides the user systematically through the measurement process. The results are displayed directly after a measurement on the handheld computer.

In addition to the actual measurement mode according to the standard, we are able to provide a special measurement for doors with temporary impulse force at the beginning of closing process based on the EN 14752: 2015.

The door-closing force measuring device thus meets all the requirements on the measurement of door closing forces. With the simple operation combined with precise measurements, the verification process can be carried out quickly and easily. Our approach also has the advantage that additional gauges from HGE can be operated with the same hand computer PSION WORKABOUT. For example, the door-closing force measurement according to EN 14752:2005, the wheel measuring gauge or the wheel distance measurement device. Thus, only one hand computer is needed for a variety of measuring equipment, which reduces the expenses.
The measuring program

The measuring process is quick and uncomplicated. The measured data are recorded immediately and are displayed visually on the handheld computer PSION WORKABOUT. The menu guidance of the handheld computer PSION WORKABOUT software has consciously been kept simple in order to allow the user a fast and simple operation.

The user has the choice of several inputs: job number/vehicle number, running performance (mileage) of the vehicle, notes, signature (touch screen), number of doors, door name (4 digits, alphanumeric) and door type with the corresponding limit values.

The measuring process provides information about the time period of the door closing process, the measured peak force and the time period from the door opening process to the next closing process. If the preset limit value is exceeded, this will be indicated to the user - both visually and acoustically. The door overview provides an immediate overview of the status of the doors to be measured and of those already measured. A tick is displayed if the door is ok. A red cross appears if a limit value has been exceeded.

An advantage of our software is that a measuring process that has been started can be interrupted and restarted later. This enables the user to flexibly organize his work and time.

The handheld computer PSION WORKABOUT provides storage capacity for more than 1,000 vehicle measurements of 26 doors.

At the end of each measuring process a detailed measuring log is created, which can be retrieved immediately on the handheld computer. The log can be signed by the inspector for a definite identification.
The HGE DataManager ©

The HGE-DataManager © software for the door closing force measuring device offers a simple and fast data transfer from the handheld computer PSION WORKABOUT to the user's PC. A choice of several formats is available for storing the measured data (PDF, Excel and MDB). The measured data are going to be displayed in the form of a closing force graph for a improved analysis.

The HGE-DataManager © software also provides the user with additional information on the current status of the rechargeable battery and the remaining storage capacity of the handheld computer PSION WORKABOUT.
The **HGE-Viewer ©** is part of the **HGE-DataManager ©**. It enables the user to represent the measured data recorded in detail in diagrams. The measurement curves can be studied and analyzed precisely.
The Spacers

According to the standard EN 14752: 2015, the force transducer is only measured with defined spacers for different door openings. The measuring point of the closing force is located at mid-height between the main closing edges of the door. The peak force has to be measured at the door opening widths of 50, 100, 200, 300 and 500 mm and another measuring point at which the greatest force is expected. The spacers are secured with a quick-release on the device.

Graph with the maximum allowable forces as a function of the door opening. The higher level of force (2) is aligned with very high traffic densities. Based on the general security concept, the operator must specify the force level in the technical specification.

Spacers for different door openings with quick-release for a fast and safe adaptation (opening widths: 50, 100, 200, 300, and 500 mm according the standard). Additional opening widths can be ordered individually.
The measuring range of the door-closing force measurement is 50 N up to 700 N. Via software the force level 1 or 2 of each door (Max. 400 N or 600 N for high traffic densities) can be set. The measurement accuracy is at forces of 50 N to 100 N ± 3 N, at forces above 100 N ± 3% of the measured reading. The diagram below shows all the measurement data of the normative measurement. The closing process is represented here by the force F [N] over time t [s]. The measured values are the peak force (Fpeak), the duration of the closing process (tmess) and the duration of the door opening to re-close (trev).

The closing process according EN 14752:2015
Special measurement - for doors with temporary force impulse at the beginning of closing

Special measurement with a temporary force impulse (Overriding- and dropping below the minimum force of 50N) at the beginning of the closing process - similar to EN 14752:2015.

The special measurement allows a door closing measurement in which the lower deviation of the 50 N limit will not be taken into consideration regarding the variable time period $t_x$. The initial force impulse e.g. caused by a rubber edge of the door does not lead to an abort of measurement.

![Diagram showing force impulse at the beginning of a closing process](image)

Figure: Force impulse at the beginning of a closing process

This special measurement is similar to the EN 14752:2015 and can be selected in the menu of the handheld software and can be assigned to the appropriate type of vehicle/door. In the vehicle remarks of the measurement log, the hint "special measurement" is registered.
**Product overview:** Door closing force measurement DC700N according to EN 14752:2015

**HGE-Door closing force measurement device with case**

**Weight approx. 10 Kg, Guarantee 2 Years**

Scope of delivery:
- Handheld computer PSION WORKABOUT including Battery, 4 GB SD memory card and protection bag
- Load cell DC700N, Special measurement mode
- Spacer for different doorways according to EN 14752:2015
- 1 Connecting cable
- 1 Tabletop station/docking station with A/C-adapter for charging the battery as well as for data transfer
- 1 USB transfer cable from tabletop station to the PC
- 1 User manual for handheld computer PSION WORKABOUT and tabletop station/docking station
- "Door closing force measurement device" user manual
- Enclosed sheet: "Administrator Information"
- Installation CD with the HGE DataManager software
- Company calibration document
- Other Accessories
Further Product: Door closing force measurement DC360N according to EN 14752:2005

Protection class IP 65 – can withstand multiple drops onto smooth concrete surfaces from 1.5 meters - with a protective bag with Shoulderbelt and belt clip.

HGE-Door closing force measurement device with case

Weight approx. 7 Kg, Guarantee 2 Years

Scope of delivery:

- Handheld computer PSION WORKABOUT including Battery, 4 GB SD memory card and protection bag
- Load cell DC3600N, Special measurement mode
- 1 Connecting cable
- 1 Tabletop station/docking station with A/C-adapter for charging the battery as well as for data transfer
- 1 USB transfer cable from tabletop station to the PC
- 1 User manual for handheld computer PSION WORKABOUT and tabletop station/docking station
- "Door closing force measurement device" user manual
- Enclosed sheet: "Administrator Information"
- Installation CD with the HGE DataManager software
- Company calibration document
- Other Accessories
Optionally to the door closing force measurement:

Set of measurement rods DIN EN 14752 and VDV 111 inclusive spring balance with calibrating service

![Measurement rods and spring balance](image)

Measurement rods according to DIN EN 14752 and VDV 111 to meet the requirements in the test sequence of closing force measurement:

- Measurement rod 1 to review the pinch protection on doors (10mm x 50mm)
- Measurement rod 2 to review the pinch protection on doors (30mm x 60mm)
- Measurement rod 3 to review the trapping detection on doors
- Spring balance, measuring range up to 200N
- Measurement rod 4 for verification of power-operated steps

Case for measurement rods 1 to 3 with spring balance

- Special measurement rod (15 mm x 60 mm) on demand
- Special measurement rods DIN 18650 Automatic door systems type CA, CB and CC on demand

- Robust hand-held computer PSION WORKABOUT Pro with touch screen, colour display, protection class IP 65 - can withstand 26 falls onto smooth concrete from 1,8 meters
- Allows input of tester name, job number, notes, vehicle- and chassis number; vehicle running performance (mileage), notes and signature (touchscreen)
- Data transfer possible into Pdf, Excel, or Mdb format
- Electronic self-test of the mechanical gauge
- Reviews maximum/minimum value: acoustic and optical signal triggered if measurement over/under runs limit value
- Handheld can be used combined with door-closing-force gauge
- Measuring process can be interrupted and restarted later.
- Flexible time and work organization
- Memory for 1000 vehicle measurements with max. 8 axles
- Measurement log to be viewed on handheld or PC
- Simple and fast data transfer from handheld to PC
Wheel Distance Measurement Unit HGE-WD

- Measurement area from 1355 mm to 1365 mm
- Length: 1500 mm
- Low weight <1250 g
- Systematic error: ± 50 µm
- Repeatability/Precision: ± 20 µm
- Temperature range: -10°C to + 50°C
- Integrated temperature measurement and expansion compensation
- Material: stainless steel and carbon fibre
- Robust hand-held computer PSION WORKABOUT Pro with touch screen, colour display, protection class IP 65 - can withstand 26 falls onto smooth concrete surfaces from 1,5 meters
- Allows input of tester name, job number, notes, vehicle- and chassis number; vehicle running performance (mileage), notes and signature (touchscreen)
- Data transfer possible into PDF, Excel, or Mdb format
- Electronic self-test of the mechanical gauge
- Reviews maximum/minimum value: acoustic and optical signal triggered if measurement over/under runs limit value
- Handheld can be used combined with the door closing force gauge
- Measuring process can be interrupted and be restarted later. Flexible time and work organization
